1

Define your problem statement

What problem are you trying to solve. Frame your problem as a how might we statement. This will bethe focus of you brainstorm.

⏱ 5 minutes

PROBLEM

How might we analyze the patient records in order to predict the diseases.

Key rules of brainstorming

To run an smooth and productive session

- Stay in topic.
- Encourage wild ideas.
- Defer judgment.
- Listen to others.
- Go for volume.
- If possible, be visual.

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

⏱ 10 minutes

Jailakshmi

- A graph should be created with the diseases that were emerged in the past and their respective year of emergence.
- A pie chart should be made with the percentage of people affected by various diseases till the past year.

Madhumitha

- All the personal health care data of each patient of the hospitals should be recorded
- The pie chart and the graph created should be merged to get a deeper analysation.
- Number of patients who recover from the medical facilities should be noted.

Abhirami

- Medicines that are sold so far should be recorded in a pie chart with respect to their sold percentage.
- The number of frequent cases in the hospital should be noted down

Janani

- The developed medicines for the past pandemic and endemic outbreaks should be noted
- Number of patient's death due to lack of medical treatment should be noted

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

⏱ 20 minutes

To be noted down

- Medicines that are sold so far should be recorded in a pie chart with respect to their sold percentage.
- The developed medicines for the past pandemic and endemic outbreaks should be noted

Piecharts

- The pie chart and the graph created should be merged to get a deeper analysation.
- A pie chart should be made with the percentage of people affected by various diseases till the past year.

Graphs,trends

- A graph should be created with the diseases that were emerged in the past and their respective year of emergence.
- All the personal health care data of each patient of the hospitals should be recorded

Birth and death scale

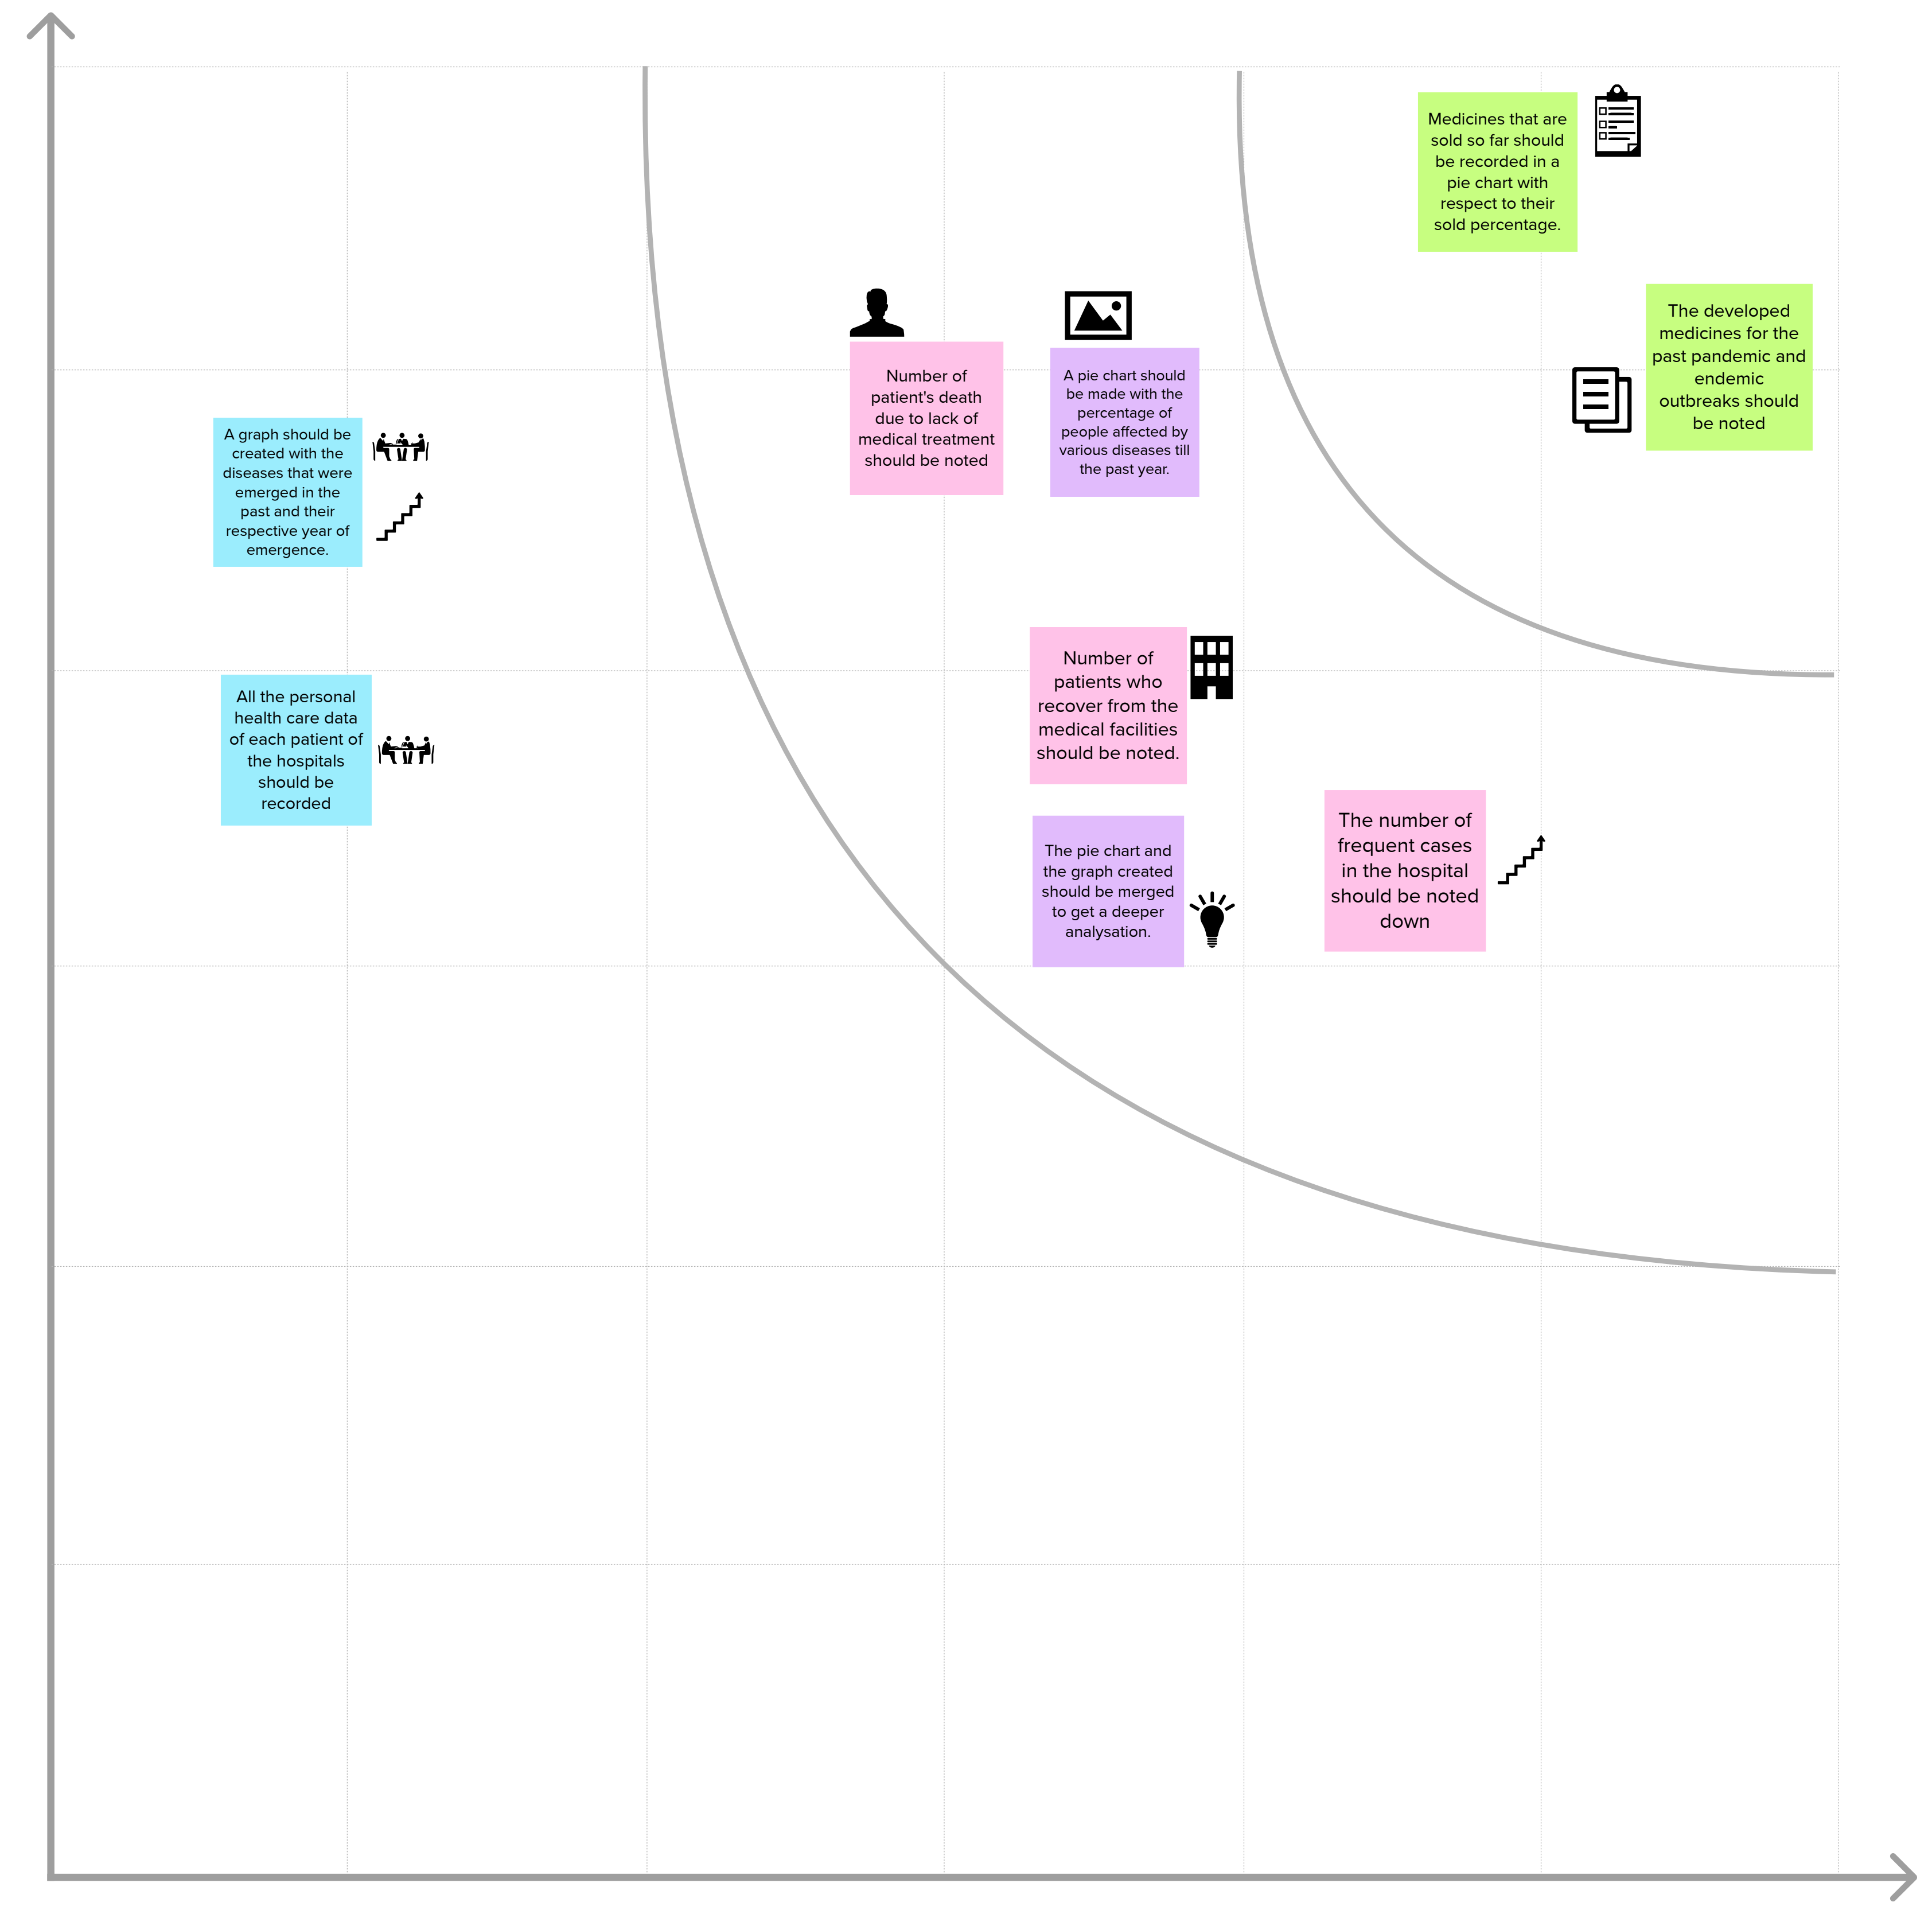
- Number of patient's death due to lack of medical treatment should be noted
- Number of patients who recover from the medical facilities should be noted.
- The number of frequent cases in the hospital should be noted down

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

⏱ 20 minutes



- A graph should be created with the diseases that were emerged in the past and their respective year of emergence.
- All the personal health care data of each patient of the hospitals should be recorded
- Number of patient's death due to lack of medical treatment should be noted
- A pie chart should be made with the percentage of people affected by various diseases till the past year.
- Number of patients who recover from the medical facilities should be noted.
- The pie chart and the graph created should be merged to get a deeper analysation.
- The number of frequent cases in the hospital should be noted down
- Medicines that are sold so far should be recorded in a pie chart with respect to their sold percentage.
- The developed medicines for the past pandemic and endemic outbreaks should be noted

Importance

If each of these tasks could get done without any difficulty or cost, which would have the most positive impact?

Feasibility

Regardless of their importance, which tasks are more feasible than others? (Cost, time, effort, complexity, etc.)
